

When I heard about this award, a specific student came to mind. Robotics club has not only made her knowledgeable about robotics, but also more confident. I witnessed this at career day. After a mechanical engineer's talk, she mentioned that she is part of the robotics club and asked how his company used robotics. Her excitement is infectious, and she is always happy to share her knowledge. One day she wowed her class by bringing in a moving robot she had built from household parts. I'm amazed at how the robotics club has changed her and helped her embrace the sciences.
