

Wireless Connectivity

at Brownsburg High School

Sponsored in part by

Students impacted: 100 | Subject: BCSC.tv and BHS TV

The equipment purchased with this grant allows students to both see and use technology that is used in the profession of video production, helps them to create professional quality broadcasts and also prepares them to use similar equipment in a real-world job. Prior to receiving this grant, the students had to run cables to locations at events where they would like cameras. This can both be difficult and tedious, and in some situations, entirely not even possible. This wireless system allows students to alleviate some of those problems while maintaining the high-quality videos they have produced over the years. Not only do the students using this equipment benefit, but also the other students and the larger community that watch their productions.
