

Fantastic Fossil Findings!

in all 2/3 High Ability classrooms

Sponsored in part by

This BEF InCredible Award Grant funded Indiana State Museum outreach programs that brought fossil formation exploration to approximately 200 High Ability 2nd and 3rd graders across all eight elementary schools. Students rotated through interactive stations with specialized materials, learning how fossils form and what they reveal about ancient life through hands-on investigation with an expert. This partnership made million-year-old history tangible for young learners, fostering collaboration and critical thinking as they explored complex scientific concepts beyond typical classroom resources.
