

# Sensory Bins

## in the Elementary K-5 Applied Skills Classrooms

*Sponsored in part by*

**All of the sensory bins in the Applied Skills classrooms had to be thrown away due to an unexpected visit from some small furry friends. These bins are used for learning and behaviors so they are a vital part of every school day. They help students with disabilities by providing a safe and engaging way to stimulate multiple senses (sight, touch, sound, smell), which can help with sensory processing, fine motor skill development, cognitive engagement, calming, and overall exploration of their environment, particularly for those with challenges related to tactile perception or sensory integration issues. This BEF grant funded new sensory bins and contents for students to continue to have access to this valuable resource.**
